IN THE CLAIMS

3238

TECH CENTER 1600, 2000

Amend claim 27 and add claims 38 and 39 as follows:

Claim 27: A method for recognition of seroconversion, comprising: incubating a sample taken from a subject, under reducing conditions which prevent formation of covalent, cross linked molecular aggregates, with at least one potypeptide consisting of an amino acid sequence found in a hepatitis C virus protein NS3 region which is immunologically reactive with said hepatitis C virus specific antibody, and determining binding of said antibody to said polypeptide to recognize
